Project Supervisor

Samodha Pallewatta

Practitioner

Background

This project is developed to enhance practitioners' ability to provide quality Behaviour Support Plans (BSPs) that are consistent with legislation, policy, and good clinical practice.

What Clients Want

01

Practitioners upload PDFs to the Canvas environment

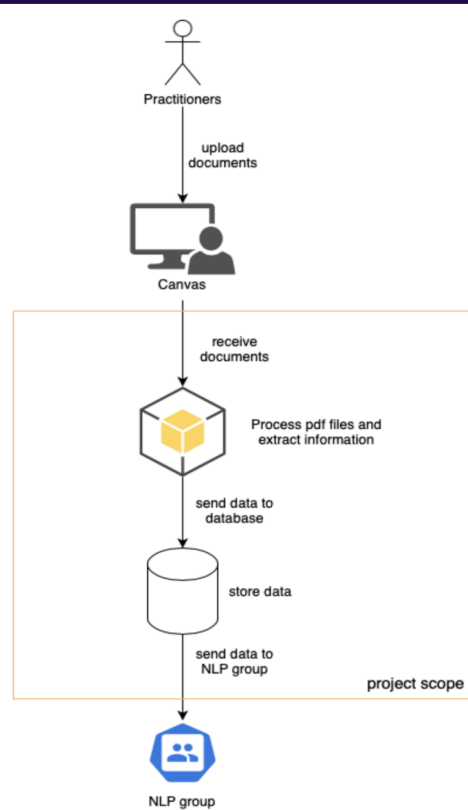

02

Practitioners receive scores/feedback

03

Data scientists receive data from the database

Project Scope

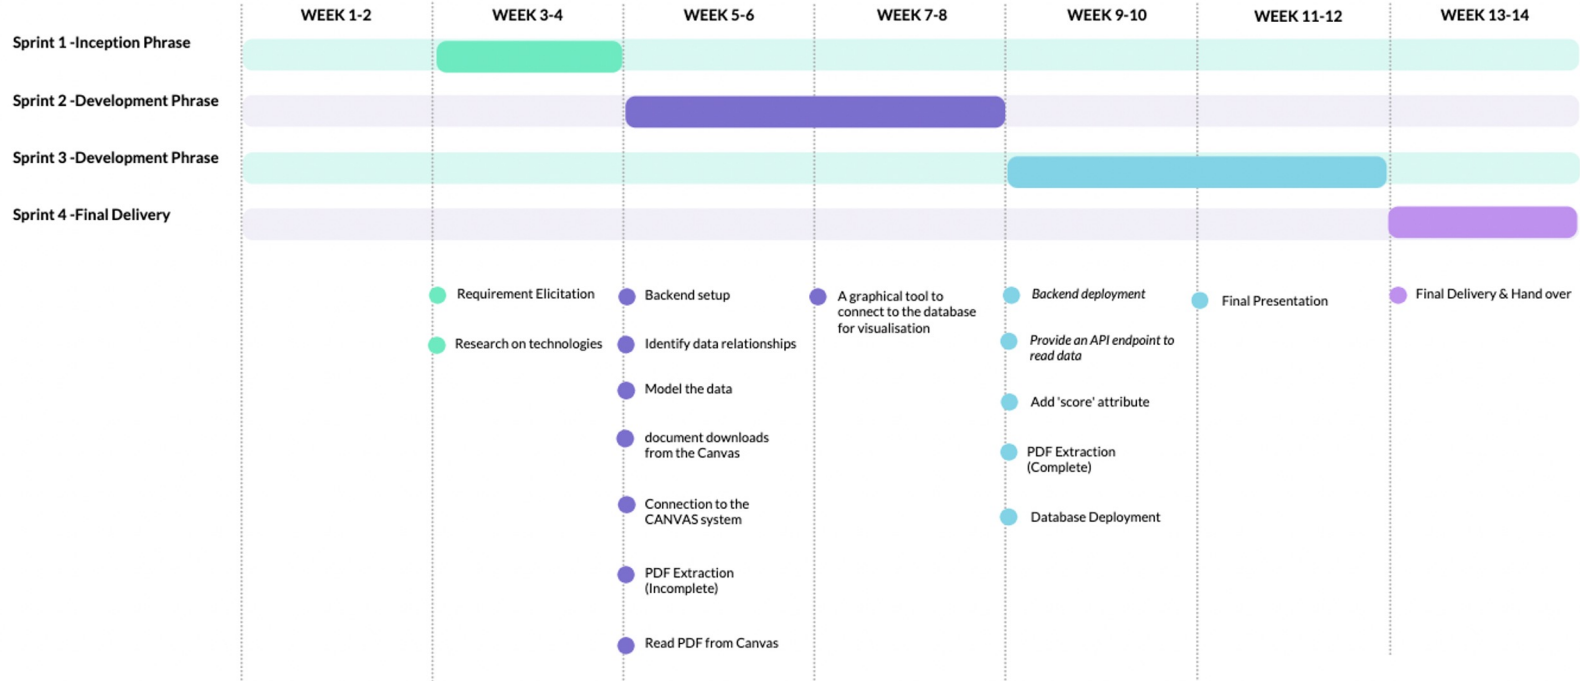

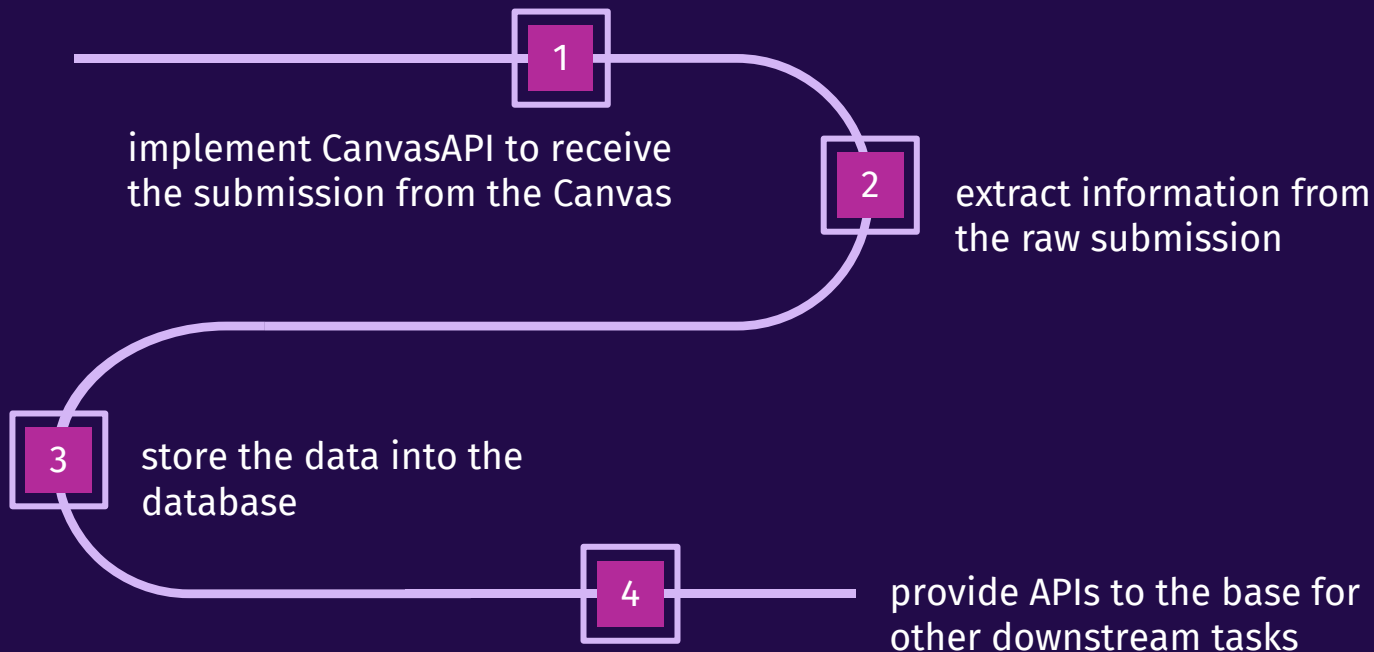

Live Demo

PDF section example

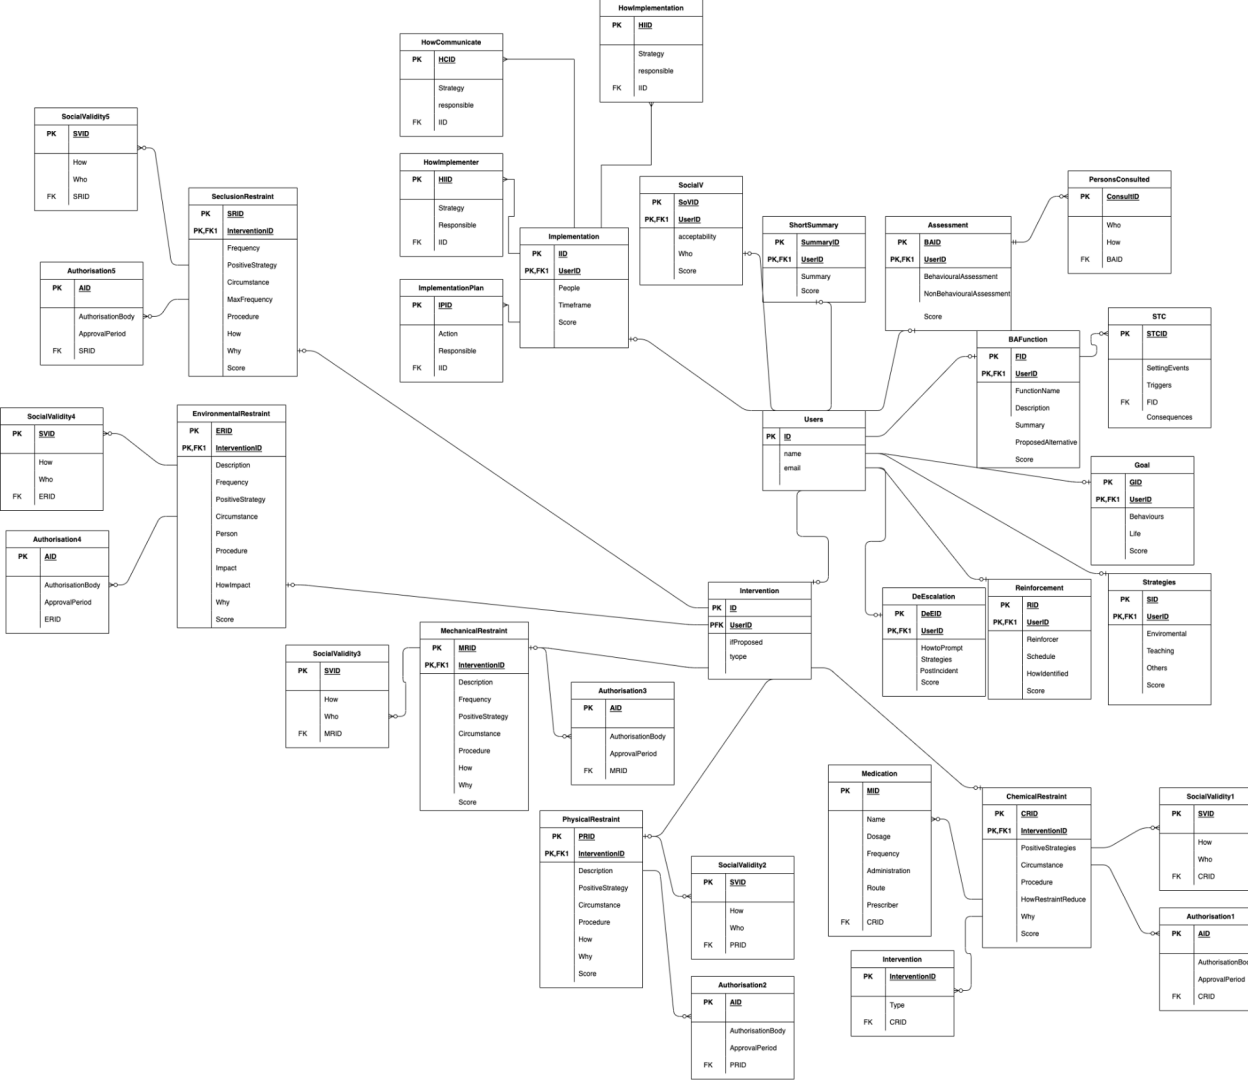

Diagram illustrating the structure of a PDF section example, showing a sequence of elements within a container:

- Section**: The overall container for the content.
- Sub-table**: A table structure within the section, containing two columns: "Who are they?" and "How were they consulted?".
- Single Text box**: A text input area, likely for outlining behavioural assessment approaches.
- Single Text box**: A text input area, likely for additional non-behavioural assessments.

The diagram shows the following sequence of elements within the container:

- Section header: *Persons consulted to prepare this PBSP (add/remove rows as required)*
- Sub-table with two columns: "Who are they?" and "How were they consulted?"
- Text box: *Outline the behavioural assessment approaches implemented to develop this PBSP*
- Text box: *Additional non-behavioural assessments undertaken or reviewed to inform the development of this PBSP*

PAGE 3 - Functional Behavioural Assessment *table: bg_function*

- We envision that this page will start with a drop-down menu that allows the user to choose one of the five functions of behaviour:
 - Avoidance/escape
 - Communication
 - Physical/sensory need
 - Seeking an object/activity
 - Other - please specify
- Once they choose a function, the text boxes below would come up for the user to input information.
- Following this, the user will be asked if they want to include another function of behaviour:
 - If YES, the drop-down menu that allows the user to choose one of the five functions of behaviour appears again. Once a choice is made, three text boxes appear again.
 - Repeat this process until the user has no more functions to add.

NOTE: The team on the existing BSW tool will be asked to review the content in this section. We need to make some additional modifications to the tool to assist in more precise scoring.

Function	FunctionName	Avoidance/escape	Communication	Physical/sensory need	Seeking an object/activity	Other - please specify
Function - Name of function (either avoidance/escape, communication, physical/sensory need, seeking an object/activity, other - please specify)						
Description of behaviour (include frequency, duration and severity) that aligns with this function <i>description</i>						
Eddie has staff and other students with his open hand or pushes them forcefully, daily, on average 2-3 incidents per day. Incidents last on average 10 minutes and Minor injuries to others as a result of being slapped or pushed. Eddie rips up books and other teaching materials or throws objects around the room. This happens less than once a day, with an average of one or two incidents every couple of days. Incidents last on average 10 minutes and there is damage to classroom materials and/or students are injured if he is using objects.						
Table: Setting events, triggers and consequences related to these behaviours (add/remove rows as necessary)						
Setting events		Triggers		Consequences/consequences		
No breakfast		Added to complete work in class		Teacher goes to Eddie to calm him down. He is either removed from the classroom.		
Normal school routine has had a change		N/A		Gains teacher attention and escapes		
Low blood sugar levels		N/A		N/A		
A summary statement outlining the functional hypothesis <i>summary</i>						
When Eddie is asked to complete work in class that he finds difficult or needs to complete independently he uses physical aggression or property damage, resulting in the teacher attending to him and him not completing the required work. The physical aggression and property damage have the same functions, gain the attention of the teacher and to avoid work that he finds difficult or is not his preference.						
Proposed alternative or functionally equivalent replacement behaviour(s) <i>proposedAlternative</i>

A diagram illustrating a database read operation. It features a dark purple background with a light purple mountain-like shape at the top. A vertical line with three parallel segments descends from the top center. Below this line is a small square box containing the number '03' in a bold, pink font. Further down is a larger, horizontal rectangular box with a white border, containing the text 'Read from the database' in a bold, white font.

    "summary": " Taylor is an energetic and outdoor loving 23 year old. He is very proud of his back yard and once he gets to know a person, will invite them over to see his lawn and garden. Taylor has lived in supported accommodation since he was 21 years old. Taylor likes to get to know people before they come to his home. Taylor likes spending time with others that can keep up with him and like spending time outside. Taylor enjoys having a big glass of cold water with ice after his outside activities. Taylor lives with two other gentlemen who are significantly older than Taylor and who prefer to be inside rather than outside. Taylor does not seem to think being inside is much fun. Taylor\u002019s mother passed away when he was 21 and his father suffered a stroke shortly after the passing of his mother, at which time Taylor entered supported accommodation. Taylor has two older brothers [Tim and Jason] who take turns visiting Taylor once a month on a Saturday morning, sometimes taking Taylor [with staff support] to see his dad who is in a nursing home approximately two hours\u002019 drive away. It is uncertain if Taylor understands what has happened to his parents, but he stopped signing for them after living in his home for a few months. Taylor looks forward to seeing his brothers each month and will spend extra time in the back yard to make sure it is very tidy for their visit. Taylor enjoys going out, some of his favourite places to visit is the local park which has a gym circuit, as well as basketball courts, soccer fields, the beach and bushwalking tracks. Taylor responds with support from his staff to members of the community with gestures, facial expressions and signs such as \u00201cgood\u00201d, \u00201cok\u00201d, \u00201chello\u00201d and \u00201cbye\u00201d. Taylor has relaxed body language and posture when out with small groups. Taylor is generally healthy, only experiencing minor colds once or twice a year. Taylor is not fussy when it comes to food and enjoys eating the healthy foods that staff prepare for him. Taylor also drinks plenty of water which further supports his health. As Taylor is constantly on the go, he has sufficient exercise daily to support his health and wellbeing. Taylor has damage to his frontal lobe that causes him to have short-term memory deficits."

    "summary": " Taylor will make a deep humming/grunting noise and pace when he is unsure of what is happening next. Taylor does this to access staff support [the provision of information]. If staff do not respond to Taylor\u002019s deep humming/grunting and pacing within two minutes and provide information on what is happening next, Taylor\u002019s behaviour that causes harm to self or others will escalate and he will run towards and full body slam the closest large solid object and commence hitting head on that object. If staff do not respond to Taylor hitting his head and full body slam into solid objects within 30 seconds and provide information on what is happening next, Taylor will run towards staff, eyes wide, hands fisted at sides, stiff body and will hit staff in the head or shoulder area with his own head.
